

Lean Yellow Belt Certification

LEAN **LS**
SOLUTIONS

Meet Your Instructor

- Background
- Lean Solutions "Train-The-Trainer" Course
- Internationally Certified Trainer

CLASS SCHEDULE

Session 1

- Roles and Responsibilities of Belts
- What is Lean & Six Sigma?
- 8 Wastes
- Voice of the Customer (VOC) and CTQs Process
- 5S
- Total Productive Maintenance
- Standard Work

Session 2

- PDCA
- Kaizen
- Continuous Flow
- Process Mapping
- Visual Management
- Jidoka/Poke Yoke
- SMED
- **YELLOW BELT EXAM**

Yellow Belt

The Fundamentals of Lean Six Sigma	Defining a Process / CTQ
History / Process / Cause & Effect	The 8 Elements of Waste / Belt Roles
Principles of Lean / Six Sigma	5S / Lean Tools / Visual Management / SMED
Process Mapping / DMAIC	Kanban / Poka-Yoke / Standardized Work
PDCA / Kaizen & Kaizen Events	Lean & Six Sigma Belt Roles
Kano Analysis	Total Productive Maintenance
Voice of Customer, & Business	Value Add & Non Value Add Work

Lean Green Belt

Project Management	Fishbone Diagrams / Graphical Analysis
Project Charter	Lean Metrics & Projects
SIPOC	FMEA
7-Quality Tools / Pareto Analysis	Facilitating a Kaizen Event
Control Charts	Strategy Execution
Control Plans	Hoshin Kanri
Gantt Chart	Change Management
Structured Problem Solving	

Six Sigma Green Belt

Six Sigma Statistics	Correlation and Regression
Measurement Systems Analysis	Introduction to DOE
Process Capability	Hypothesis Testing

BODY OF KNOWLEDGE

Black Belt

Mann-Whitney / Kruskal-Wallis	Orthogonal Designs
Friedman Mood's Median / Simple Linear Regression	Full Factorial Experiments & Designs
1 Sample Sign / 1 Sample Wilcoxon	Fit, Diagnose Model and Center Points
One and Two Sample Proportion	Taguchi Designs Control Phase
Chi-Squared (Contingency Tables)	Statistical Process Control (SPC)
Correlation / Regression Equations	Data Collection for SPC / I-MR Chart
Regression Equations / Residuals Analysis	Xbar-R Chart / U Chart / P Chart
Non- Linear Regression	NP Chart / X-S chart
Multiple Linear Regression	CumSum Chart / EWMA Chart
Confidence & Prediction Intervals	Binomial Distribution and Calculations
Designed Experiments / OFAT	Poisson Distribution and Calculations
Experiment Objectives	Design for Six Sigma (DFSS) / Hoshin Kanri
Experimental Methods	Cost Benefit Analysis / ROI, Payback Period
Experiment Design Considerations	
Linear & Quadratic Mathematical Models	

A screenshot of a homework assignment list. The list is titled "Homework" and contains six items, each with a radio button icon and a text label. The items are: "Homework - Due before Day 2", "Homework - Due Before Day 3", "Homework - Due before Day 4", "Homework - Due before Day 5", "Homework - Review", and "ILSSI Green Belt Exam Information".

Homework	
☐	Homework - Due before Day 2
☐	Homework - Due Before Day 3
☐	Homework - Due before Day 4
☐	Homework - Due before Day 5
☐	Homework - Review
☐	ILSSI Green Belt Exam Information

HOMework

As a Yellow Belt student, you are expected to review and complete the homework for each lesson.

The assignments can be accessed on the student dashboard inside your course.

YELLOW BELT CERTIFICATION EXAM

- Lifetime certification
- Done online on your student dashboard after training is finished
- Open Book
- 50 Multiple Choice Questions
- Pass mark is 70%
- Result issued immediately
- Retake is available

YELLOW BELT CERTIFICATION EXAM

Find information on how to access the exam on the student dashboard

Download the class PowerPoint slides (as a searchable pdf) to help while studying for and taking the exam

LEAN SIX SIGMA ROLES & RESPONSIBILITIES

Champion + Executive Support

Black Belts

Green Belts

Yellow Belts

CHAMPION/ PROCESS OWNER

Champions help to identify and select the most important projects to work and break down political barriers and roadblocks for Lean Six Sigma to succeed

- Assist with Project selection and initiation
- Obtain needed project resources and eliminate roadblocks
- Participate in project review meetings
- Provide Governance / Ask the right questions
- Set up a training programs

BLACK BELT

Black Belts are Lean Six Sigma process experts, think strategically and lead larger projects within the business.

- Approx 1 Black Belt every 50 - 100 employees (1%)
- Dedicated to process improvement 100% of time
- Project team leader for larger / high profile projects
- Facilitates project teams and helps Green belts
- Thinks strategically and towards Enterprise level goals
- Works cross-functionally

GREEN BELT

Green Belts are practitioners of Lean Six Sigma improvement and lead small/medium projects or support larger Black Belt Projects.

- Approx 1 Green Belt for every 10-30 employees (5%)
- Involved approx 50% time on projects
- Typically works projects within their functional area
- Team members for larger projects
- Team leaders for small / medium projects

YELLOW BELT

Yellow Belts are Workers and Functional Specialists and apply the Lean Six Sigma Methodology to their own work and serve on project teams on a part-time basis.

- As many as possible (target is 100% of workers)
- Functional workers, Subject Matter Specialists. Team members
- Provide support to Black Belts and Green Belts as needed
- Team members on project teams
- Supporting projects with process knowledge and data collection

What is Lean & Six Sigma?

Historical Phases in Manufacturing & “Lean Principles” Applied Outside of Toyota

	When	What	Examples
Craft Production	Before 1900s	Individual pieces made by experts	Everyone
Mass Production	1910 – 1980s	Large volumes of standard product made in specialized processes	FORD
Lean Manufacturing	1970s – 1990s	Small batches with pull, approaching “1-pc flow”	Japanese companies, Intro to US
Lean Operations	2000s – Future	Manufacturing companies and Non-manufacturing companies improving operations using Lean principles	Banking, Insurance, Manufacturing
Lean Enterprise	2000 – Future	Operations, Design Engineering, Marketing, Sales, and support processes fully integrated	Everyone

INFLUENTIAL LEADERS

IN LEAN & SIX SIGMA PRINCIPLES

The evolution of Lean & Six Sigma was heavily influenced by American and Japanese engineers, statisticians and quality control experts 1950-1980.

Toyota Production System (TPS)

HOUSE OF LEAN

“The Machine that Changed the World” 1990

“Lean Thinking” (1993)

ORIGINS OF SIX SIGMA

MOTOROLA & GENERAL ELECTRIC (GE)

Bob Galvin: CEO of Motorola 1980's

1985 Bill Smith coins the term "Six sigma"

1987 Motorola trademarks the term "Six Sigma"

ORIGINS OF SIX SIGMA

MOTOROLA & GENERAL ELECTRIC (GE)

Jack Welch : CEO of GE 1981-2001

Jack Welch (CEO) made Six Sigma the management and corporate culture of General Electric 1981 – 2001.

- Every manager was trained as at least a Green Belt level.
- During his tenure at GE, the company's value rose 4,000%.

WHY IS IT CALLED SIX SIGMA?

σ , sigma

‘Sigma’ is a Greek Symbol to signify the mathematical concept called Standard Deviation. This is an important measure of Variation in a process.

$$\sigma = \sqrt{\frac{\sum_{i=1}^N (X_i - \mu)^2}{N}}$$

You don't need to remember or even understand this equation...Its just 'behind the scenes'!!

SIX SIGMA

Six Sigma refers to a process having 6 Standard Deviations (Sigmas) between the mean average of the process (center) and the closest customer specification limit.

***LSL = Lower Specification Limit**

***USL = Upper Specification Limit**

DEFECTS VS PROCESS SIGMA LEVEL

Process Sigma Level	Defects per Million Opportunities (DPMO)
1	691,500
2	308,500
3	66,800
4	6,200
5	233
6	3.4

DEFINITION :

A “Six Sigma Process” is one that produces no more Than 3.4 defects per million opportunities for defects

3.4 DPMO

A “Six Sigma Process” is often described one that produces no more than **3.4 Defects Per Million Opportunities** for defects

3.4 DPMO (Defects Per Million Opportunities)

0.00034 % Defects

99.99966 % Correct

WHAT DOES A 0.1% DEFECT RATE LOOK LIKE?

What is 99.9% Quality?
...Or 0.1 % Defects?

- 1 unsafe plane landing per day at JFK International Airport
- 100 wrong drug prescriptions per day in US
- 10,000 Houses without electric / day in US
- 100,000 wrong bank transfers per day
- 1 million e-mails sent incorrectly per day

This is why we need Six Sigma processes!

Lean & Six Sigma Complement Each Other

Lean can work alone

Six Sigma can work alone

But...they work really great together!

LEAN PRINCIPLES

1. Understand the **Value** in the product or service
2. Identify the **Value Stream** in each product or service
3. Make the product or service **Flow**
4. **Pull** value from the downstream (just in time delivery)
5. Continuous Improvement towards **Perfection**
6. Involve workers and **Respect Workers** opinions

NOTE: Only the first 5 Lean Principles were taught.
Many books and videos still refer to the '5 Lean Principles'

**Source: Lean Thinking by James P. Womack and Daniel T. Jones*

SIX SIGMA

PRINCIPLES

1. **Reduce Variation** and you will reduce Defects / Errors
2. **Root Cause Analysis** of problems
3. **Use Data** for Decision making (instead of guessing!)
4. Use of **Statistical Analysis** tools and charts
5. Process **Optimization** using Designed Experiments and Regression Analysis, Predictive Modelling. Hypothesis Tests
6. Improvement projects using the **DMAIC** Framework

We Use Lean & Six Sigma For
Process Improvement

Increase Value

Traditional View of Our Processes

Waste & Variation

What Our Processes Actually Look Like

3-STAR MANUFACTURING INC.

What are the possible Defects?

Shapes

Colors

Size

Concentric

What Defect Rate is acceptable?

3-STAR MANUFACTURING INC.

PERFECT FOR CAKE DECORATIONS

- 3 Shapes
 - 3 different Colors
 - 3 different Sizes
 - Concentric Shapes
-
- Target Weight = 10 grams
 - Upper Specification Limit = 12 grams
 - Lower Specification Limit = 8 grams

3-Star Manufacturing Inc.

3-Star Manufacturing Inc.

LEAN
SOLUTIONS

ROLL → WEIGH → FLATTEN → CUT → ASSEMBLE → WEIGH

Roll Ball

Small : 8 to 12 grams Target = 10 grams

Medium : 13 to 17 grams Target = 15 grams

Large : 18 to 22 grams Target = 20 grams

3-Star Manufacturing Inc.

Perfect for Cake Decorations

- 3 Shapes
 - 3 different Colors
 - 3 different Sizes
 - Concentric Shapes
-
- Target Weight = 10 grams
 - Upper Specification Limit = 12 grams
 - Lower Specification Limit = 8 grams

INPUTS

What do we need to create Value for Customers ?

Hint : The '4 M' rule

M A T E R I A L S

M A N P O W E R

M A C H I N E S

M E T H O D

INPUTS

What do we need to create Value?

Examples of Inputs in your work (Which 'M' is it ?) :

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____

OPERATIONS

Transforming the Inputs into Outputs

Examples of Operations at your company :

1. _____
2. _____
3. _____
4. _____

OUTPUTS

What Your Customer Wants

The '**TOP 5**' Outputs at your company :

1. _____
2. _____
3. _____
4. _____
5. _____

Increase Value

Lower Value  Higher Value

- Safer
- Easier
- Better Quality (less defects & rework)
- Faster (on time)
- Lower Cos

Shigeo Shingo

'There are four purposes of improvement: easier, better, faster, and cheaper. These four goals appear in order of priority. Hence the first is to make the work easier for workers while improving the fruits of their labour.'

'Intensifying the work should never be undertaken even if the same working hours are maintained.'

Non-Stock Production : The Shingo System of Continuous Improvement', (1988)

Shigeo Shingo was a primary architect in the development of the Toyota Production System.

SQDC

1. Easier and Safer for workers (S)
2. Produce Better Quality Outputs for customers (Q)
3. Deliver the Outputs on Time (D)
4. Lower the Cost of Production (C)

The SQDC model of Production

SUMMARY

At This Point You Should Be Able To...

- Describe the defined roles of Lean & Six Sigma belts
- Describe the goals of our Process Improvement
- Understand the origins of Lean & Six Sigma
- Describe the principles of Lean
- Describe the principles of Six Sigma

QUIZ:

1. What was the name of the first company to use the name 'SIX SIGMA' to describe its Quality Management System?
 - MOTOROLA
2. What is the First Principle of Lean production ? What is the most important thing that a Lean process must produce?
 - VALUE (for the customer of the process)
3. Which Japanese company is considered as being the first to use true 'Lean Production "effectively and successfully"'?
 - TOYOTA
4. A basic principle of Six Sigma is to always find the true original source of a defect or problem. This is called _____?
 - ROOT CAUSE ANALYSIS
5. A "Six Sigma Process" is often described one that produces no more than 3.4 DPMO What does DPMO stand for?
 - DEFECTS PER MILLION OPPORTUNITES FOR DEFECTS

QUIZ:

6. What is the role of a Yellow Belt on a Lean Six Sigma project?
 - A YELLOW BELT IS A TEAM MEMBER WHO ASSISTS A GREEN OR BLACK BELT, USING THEIR KNOWLEDGE OF THE PROCESS THAT THEY CURRENTLY ARE WORKING WITHIN.
7. What is the role of a Green Belt in an organization ?
 - A GREEN BELT IS A PROJECT TEAM LEADER FOR SMALL AND MEDIUM SIZED PROCESS IMPROVEMENT PROJECTS.
8. What is the role of a Black Belt in an organization ?
 - A BLACK BELT IS A PROJECT TEAM LEADER FOR LARGE PROBLEM SOLVING / IMPROVEMENT PROJECTS or OVERSEES THE WORK OF GREEN BELTS FOR MULTIPLE PROJECTS. A BLACK BELT IS A FULL TIME PROBLEM SOLVER FOR THE ORGANIZATION.

VALUE & WASTE

Lean focuses on identifying which activities add value, and which do not...

Value Added Activity

- Transforms or shapes (for the 1st time) material or information to meet customer requirements
- Anything the customer is willing to pay for ONE TIME ONLY

Non-Value Added Activity (Waste)

- Anything else that consumes resources or is related to rework or scrap
- Incidental Non-Value
 - Serves you or the company but the customer doesn't value it

WHAT DO YOU WANT TO PAY FOR?

If you were the patient, what would you be willing to pay for?

Value Added steps are those the customer is willing to pay for — all else is a form of Non-Value Added or Waste.

Doctor Visit	
Making appointment	10 min
Driving to the doctor's office	30 min
Filling out insurance and health history forms	10 min
Waiting in the reception area	20 min
Walking to the vitals room	2 min
Nurse taking your blood pressure and weight	4 min
Walking to the exam room	2 min
Waiting in the exam room for the doctor	15 min
Exam by doctor	15 min
Checking out at the front desk	3 min
Driving home	30 min
TOTAL	141 min

Recognizing Waste

D

DEFECTS

Waste from a product or service failure to meet customer expectations

O

OVERPRODUCTION

Waste from making or staging more product than needed

W

WAITING

Waste from time spent waiting for other processes, approvals etc.

N

NON-UTILIZED TALENT

Waste due to people's talents, skills, and knowledge that are not utilized

T

TRANSPORTATION

Wasted time, resources, and costs when unnecessarily moving products

I

INVENTORY

Wastes resulting from excess products, materials, or storage points

M

MOTION

Wasted time and effort related to unnecessary movements by people

E

EXTRA-PROCESSING

Waste related to more work or higher quality than is required

LEAN
SOLUTIONS

‘Non-Traditional’ Categories of Waste

Utility/Energy (Heat/Electrical) Losses

Miscommunications

Over - Communications

Skilled Staff Losses

CATEGORIES OF ACTION

FBI WARNING

Warning: The unauthorized reproduction or distribution of this copyrighted work is illegal. Criminal copyright infringement, including infringement without monetary gain, is investigated by the FBI and is punishable by up to 5 years in federal prison and a fine of \$250,000

LEAN
SOLUTIONS

WASTE WALK

A planned visit to where work is being performed to observe what's happening and to note the waste.

- Explain to the people in the area of observation what you are doing
- Study the area for 20-30 minutes
- As you see work that appears to be waste, jot down the example you see
- Take action immediately if possible or develop a plan to remove waste

Waste Walk Form

Date: xx/xx/xx
 Location/area: Main Production
 Observer: Craig To

Type of Waste	Definition	Observations
Defect/Rework	Product that does not meet customer requirements	Excessive amount of Hoods in Repair Bay, 4 racks at 20 per rack
OverProduction	Producing more than is required	There are 35 Left Hand Rockers but only 7 Right Hand Rockers. These ship as sets of one each
Waiting	Delays in the process, waiting for next step to occur	Paint Line is full of parts waiting to be loaded
Non-Utilization of Talent and/or Resources	Not utilizing people's skills properly	Lay up operators are being used to hang parts on the paint line
Transportation	Unnecessary movement of material from one location to another	Material Handler is required to move parts from lay-up, to bonding, to sanding, and to paint.
Inventory	More supplies/equipment than required to service customer	275 Hood outer panels are held at bonding
Motion	Movement that does not add value to the work being completed	Left and Right Hinges are removed from boxes and put in totes to be staged at bonding cell
Excess-Processing	More work is done than required by the customer, or things are made more complicated than necessary	Hood outer panel is getting sanded in areas that are no longer used to bond to inner panel

3-Star Manufacturing Inc.

Where is the **Waste**?

ROLL → WEIGH → FLATTEN → CUT → ASSEMBLE → WEIGH

LEAN
SOLUTIONS

QUIZ :

1. Which of the traditional 8-Wastes of 'DOWNTIME' is concerned with reducing the complexity of processes and taking out unnecessary steps or activities ?
 - **NON-ESSENTIAL PROCESSING / OVER PROCESSING**
2. What is the name of the Waste of producing more than the customer demand can absorb ?
 - **OVER-PRODUCTION**
3. What is Waste called when an activity or step in process needs to be repeated because it was not done 'Right-First-Time' ?
 - **REWORK / DEFECTS**
4. What Waste results in Queues or Backlogs of materials or work ?
 - **WAITING (DUE TO A BOTTLE-NECK IN THE PROCESS)**
5. What is the Japanese word for 'Waste' ?
 - **MUDA**

Lean Principles & Tools

6 FUNDAMENTALS OF LEAN

- Value 
- Value Stream
- Flow
- Pull
- Perfection
- Respect for People

WHO IS YOUR CUSTOMER?

IN LEAN SIX SIGMA...

- Value is always viewed “Through the eyes of the Customer”
 - Who is our customer ?
 - What is The Voice of our Customer (VOC) ?
 - What is Critical to Quality (CTQ) to our Customer ?

WHO IS YOUR CUSTOMER?

'Internal Customers' VS 'External Customers'

- An internal Customer could be a different department or operation. It could be the next downstream operation in the process.
- Can you name some different types of 'Internal/External Customers'?

WHAT IS A CTQ?

Critical to Quality (CTQ's) are measures we use to capture VOC properly.

- Also referred to in some literature as :
 - CTC's – Critical to Customer
 - CTS's – Critical to Satisfaction
 - CTQC - Critical to Quality Characteristics
- CTQ's are a tool to help to break down VOC into well defined and measurable terms.

DEFINING CTQ'S

Customer CTQs usually fall into one of 4 categories :

DEVELOPING CTQ'S

SPECIFICATION LIMITS

“Specification Limits” are Lean Six Sigma’s way of defining your customer expectations

USL = Upper Specification Limit

LSL = Lower Specification Limit

Also called ‘Tolerance limits’ in some businesses

KANO ANALYSIS

Developed in the 1980s by Professor Noriaki Kano, which classifies customer preferences into three main categories

KANO ANALYSIS

The Kano Model has three main categories of attributes:

CTQ's & KANO

Consider 3-Star Manufacturing

- What are the CTQs for the process?
- What are the Basic Requirements?
- What are Performers?
- What are Delighters?

QUIZ:

1. What Tool is used to understand what is Critical to Quality (CTQ) by Forming 3 categories: *threshold*, *performance*, and *excitement*?
 - **KANO ANALYSIS**

2. Splitting Customers into groups according to different needs or behaviours is called _____.
 - **SEGMENTING**

3. CTQs are also sometimes called CTCs or CTSs. What does CTS stand for?
 - **CRITICAL TO SATISFACTION**

4. Give one example of a method used to understand the **Voice of the Customer**?
 - **SURVEYS**
 - **FEEDBACK**
 - **FOCUS GROUPS**
 - **REPEAT SALE METRICS, etc**

5S

Continuous
Improvement should
not be just an event

5S

WHY 5S?

Workplace Organization and Visual Management should be Fundamental to Your Facility

- SAFER!
- Problems Become Visible
- Promotes Culture

Result: Improved Safety, Quality, and Cost

FIND A FLATHEAD SCREWDRIVER

FIND A FLATHEAD SCREWDRIVER

LEAN
SOLUTIONS

Exercise #1

60

SORT

- Critically examine everything
- Red Tag Process
 - Always use-Have a place for it
 - Sometimes use-Tag and Date
 - Never use-Red tag area
- Need a 6mm Hex? Keep only the 6mm Hex, not a whole set
- Members know best what is needed
- Everything in the area should have a purpose

Exercise #2

60

STRAIGHTEN or SET IN ORDER

- For what's left, where does it go?
- Be mindful of frequency of use
- Be Visual
- Arrange so things are easy to find and readily retrieved.
- “A place for everything and everything in it's place.”

SHINE

- Clean the area (tools, equipment, lighting, etc.)
- Re-painting may be required
- Implement regular housekeeping so that any dirt or grease is immediately obvious.
- Always use your 5S Color Standards

Exercise #3

60

37 1 28 46 19	35 17 26 44 8	16 43 25 34 7
38 2 47 11 20 29	27 36 45 9 18	24 15 6 42 33
3 12 39 48 30 21	13 31 4 40 22 49	14 23 32 41 5 50

STANDARDIZE

- Implement Work Center 5S Board
- Take a picture of the area
- Assign an area owner
- Develop standard work for regular housekeeping
- Implement Daily End of Shift Checks

Exercise #4

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50

SUSTAIN

- Implement Layered Process Audits in order to sustain improvements

5S Audit & Results

5S Workplace Scan Checklist										
Department:		Place an "X" in the appropriate box based on number of issues observed.								
Date:		Scored By:		Number of Observations >>						
				0	1-2	3-4	5-6	>6		
Sort	Distinguish between what is needed and not needed									
	1	Unneeded equipment, tools, furniture, etc. are present								
	2	Unneeded items are on walls, notice boards, etc.								
	3	Items are present in walkways, stairways, corners, fire exits etc.								
	4	Unneeded inventory, supplies, parts, or materials are present								
	5	Safety hazards (water, oil, chemical, machines) exist								
		Subtotal >>	0	1	4	6	0			
Set in Order	A place for everything and everything in its place									
	1	Correct places for items are not obvious								
	2	Items are not in their correct places

Monthly 5S Overview

Monthly Audit Results

5S Your Computer Hard/Shared Drive

5S Principle	Description
Sort	• Check all your files and software, and get rid of any that are unnecessary
Set In Order	• Organize your files and optimize the use of file folders • Keep in mind how often you need them and how much time you need to store them • Create specific shortcut icons for the most used files or programs
Shine	• Eliminate any files under deleted items, sent items and the recycle bin
Standardize	• Establish procedures for maintaining your computer 5S system
Sustain	• Include hard drives in 5S audits • Focus on how people maintain files and program organization, and the time they spend doing so

5S 3-Star Manufacturing Inc.

5S IN YOUR COMPANY DISCUSSION

- What areas of your work could do with 5S?
- Who do you need to get involved?
- When are you going to try 5S?

QUIZ :

1. Which stage of the 5S method is used to ensure that the workers have the good habits and discipline to continue the other 4S tasks?
 - **SUSTAIN**

2. In 5S the action of removing unnecessary tools, equipment and materials from the workspace is called

 - **SORT**

3. Cleaning the workplace of dirt, dust and litter is called what in 5S ?
 - **SHINE**

4. Give one example of a 5S method used for **SET IN ORDER / STRAIGHTEN**
 - **SHADOW BOARDS**
 - **RACKS**
 - **COLORED LABELS**
 - **FLOOR MARKING etc**

TOTAL PRODUCTIVE MAINTENANCE

LEAN
SOLUTIONS

WHAT IS TOTAL PRODUCTIVE MAINTENANCE?

A set of techniques which ensures that each and every machine in the production process is always able to perform its required task

LEAN
SOLUTIONS

WHAT IS TOTAL PRODUCTIVE MAINTENANCE?

- The approach needs to be Total; It requires the participation of all employees. Production operators are trained to handle routine maintenance activities such as lubricating, cleaning, tightening and inspecting equipment on a regular basis
- It blurs the distinction between the roles of production and maintenance by placing a strong emphasis on empowering operators to help maintain their equipment.

WHY IMPLEMENT TOTAL PRODUCTIVE MAINTENANCE?

TPM increases stability by...

- Reducing unscheduled downtime
- Determining abnormal / normal conditions at a glance
- Improving knowledge on equipment operation and maintenance
- Equipment performs as expected
- Equipment is ready when needed

TPM APPROACH

A shared responsibility for the equipment;

- It gives operators a chance to take ownership of their equipment
- Frees up the resources needed to fix problems caused by lack of maintenance
- Operators work together with maintenance

It seeks the total productivity of all the equipment;

- Achieved by focusing on the elements which account for the usual major losses, or downtime that occur to equipment

LEAN
SOLUTIONS

MEASURE OEE

OEE stands for “Overall Equipment Effectiveness”.

OEE is a metric that identifies the percentage of planned production time that is truly productive. It was developed to support TPM initiatives by accurately tracking progress towards achieving “perfect production”.

Simply put – it identifies the percentage of manufacturing time that is truly productive.

DEVELOP

THE ROUTINE & SCHEDULE

- Research equipment-maker's recommendations
- Add “experience-based” things to be done
- Utilize all your resources when determining tasks
- Use Preventative Maintenance System already in place

TRAIN PERSONNEL ON RESPONSIBILITIES

Operating equipment correctly and safely

- Do operators know how to start-up, shut-down and operate the equipment?
- Can operators run the equipment safely?
- Can operators changeover the equipment safely and in the targeted time?

Knowing recommended equipment maintenance

- Do operators have the required level of knowledge on the equipment?
- Do operators understand how to perform the required Preventative Maintenance routine, and scheduled tasks?

OUR ROLES & RESPONSIBILITIES

Operators perform routine maintenance

- Think of them as the car owner
- Goal is to keep the car at optimal performance
 - Learn to properly operate car
 - Check and refill fluids
 - Keep automobile clean
 - Provide feedback to mechanic when problems occur

Maintenance delivers specialized service

- Think of them as the Mechanics
- The goal is a well running automobile
- Provide pre-scheduled maintenance
- Diagnose problems when car not performing to expectations
- Trained to handle more complex repair
- Provide feedback to car owner

MONITOR TO IMPROVE

- Visual card systems are effective to monitor the TPM Systems
- TPM Tasks are listed on colored cards; Red/Incomplete and Green/Completed
- Tasks are broken up into Daily, Weekly, and Monthly Requirements
- When a TPM task is complete the card is turned from red to green
- Cards are flipped back to red depending on the frequency of the TPM task i.e., the beginning of the week, or month
- The TPM system is monitored using Layered Process Audits

TPM FOUNDATION:

DAILY DATA

Hour by Hour can be used to identify the losses that are occurring

There are five main categories of losses:

1. Equipment downtime
2. Changeover
3. Minor stops
4. Speed Loss
5. Rework/Scrap

Break down each category for effective Problem Solving

PARETO ANALYSIS

Use Team Improvement Boards to Pareto Losses

Reduce the Planned
(Changeover)

Eliminate the Unplanned Issues

PARETO ANALYSIS

Second Level Breakdown Pareto May Be Necessary

Breakdown the Machine Issues

STANDARD WORK

LEAN
SOLUTIONS

ONE OF FOUR RULES OF TOYOTA

All work shall be highly specified as to content, sequence, timing and outcome.

WHAT IS STANDARD WORK

- Detailed work sequence of the operator
- Provides a routine for consistency of an operation
- Details the best process we currently know
- Is the basis for improvement by defining the normal

WHY STANDARD WORK?

- Prevents backsliding
- Makes problems obvious
- Removes ambiguity
- Makes managing schedules/resources easier
- Agree to work together/agree to change together

Draw a Pig Exercise

Customer Expectations

- Happy pig, with smile
- Curly tail
- Nose with two nostrils
- One eye
- 4 legs
- 2 ears
- “Plump”

STANDARD WORK DOCUMENT

Work Instructions

8										
9										

AUDITING STANDARD WORK

AUDIT PURPOSE

- Check understanding of the standard
- Discover individual difficulties
 - Did lack of training lead to the problem
 - Kaizen: to take away difficulty
- Identify waste in process

Standard Work audits are NOT meant to be punitive

WHY AUDIT STANDARD WORK?

- Go to Gemba
- Establish standards if not in place
- Kaizen day after day, even the small things
- Kaizen creates basis for larger change
- Developing people
- Encourage team work

STANDARD WORK

AUDIT AGENDA

Member trained & documented?

Work area layout correct?

Work in progress within allowance?

Step sequence followed?

Within time?

Results discussed with member?

What to do if someone is not following the standard?

ASK WHY

**They're not following the
standard**

RESPOND TO

The reason they indicate

STANDARD WORK SUMMARY

- Every facility must implement and maintain Standard Work
- Applying Standard Work demonstrates how methods to improve quality, increase operational speed, and reduce costs are all interconnected
- Standardized Work establishes the foundation for all productivity, quality, safety, and cost improvements of the future

STANDARD WORK SUMMARY

- Standard Work - The BEST combination of people and machines (assets) while using the minimum amount of materials, equipment and space
- We need to test out possible improvements by changing only one thing at a time.
- Standard work should be developed by those who perform the tasks. The operators that do the work are most likely to know how to do it well and are the experts.

LEAN
SOLUTIONS

QUIZ:

1. All work shall be highly specified as to content, sequence, timing and _____.
 - **OUTCOME**
2. True or False? Standard work provides a routine for consistency of an operation.
 - **TRUE**
3. True or False? Standard work helps to hide problems.
 - **FALSE**
4. Discussion: Why is it so important to audit standard work?

End of Section 1

Lean Yellow Belt Certification

LEAN **LS**
SOLUTIONS

CLASS SCHEDULE

Session 1

- Roles and Responsibilities of Belts
- What is Lean & Six Sigma?
- 8 Wastes
- Voice of the Customer (VOC) and CTQs Process
- 5S
- Total Productive Maintenance
- Standard Work

Session 2

- PDCA
- Kaizen
- Continuous Flow
- Process Mapping
- Visual Management
- Jidoka/Poke Yoke
- SMED
- **YELLOW BELT EXAM**

QUIZ 1 REVIEW:

1. What was the name of the first company to use the name 'SIX SIGMA' to describe its Quality Management System?
 - MOTOROLA
2. What is the First Principle of Lean production ? What is the most important thing that a Lean process must produce?
 - VALUE (for the customer of the process)
3. Which Japanese company is considered as being the first to use true 'Lean Production "effectively and successfully"'?
 - TOYOTA
4. A basic principle of Six Sigma is to always find the true original source of a defect or problem. This is called _____?
 - ROOT CAUSE ANALYSIS
5. A "Six Sigma Process" is often described one that produces no more than 3.4 DPMO What does DPMO stand for?
 - DEFECTS PER MILLION OPPORTUNITES FOR DEFECTS

QUIZ 1 REVIEW:

6. What is the role of a Yellow Belt on a Lean Six Sigma project?
 - A YELLOW BELT IS A TEAM MEMBER WHO ASSISTS A GREEN OR BLACK BELT, USING THEIR KNOWLEDGE OF THE PROCESS THAT THEY CURRENTLY ARE WORKING WITHIN.
7. What is the role of a Green Belt in an organization ?
 - A GREEN BELT IS A PROJECT TEAM LEADER FOR SMALL AND MEDIUM SIZED PROCESS IMPROVEMENT PROJECTS.
8. What is the role of a Black Belt in an organization ?
 - A BLACK BELT IS A PROJECT TEAM LEADER FOR LARGE PROBLEM SOLVING / IMPROVEMENT PROJECTS or OVERSEES THE WORK OF GREEN BELTS FOR MULTIPLE PROJECTS. A BLACK BELT IS A FULL TIME PROBLEM SOLVER FOR THE ORGANISATION.

QUIZ 2 REVIEW:

1. All work shall be highly specified as to content, sequence, timing and _____.
 - **OUTCOME**
2. True or False? Standard work provides a routine for consistency of an operation.
 - **TRUE**
3. True or False? Standard work helps to hide problems.
 - **FALSE**
4. Discussion: Why is it so important to audit standard work?

QUIZ 2 :

1. Which of the traditional 8-Wastes of 'DOWNTIME' is concerned with reducing the complexity of processes and taking out unnecessary steps or activities ?
 - **NON-ESSENTIAL PROCESSING / OVER PROCESSING**
2. What is the name of the Waste of producing more than the customer demand can absorb ?
 - **OVER-PRODUCTION**
3. What is Waste called when an activity or step in process needs to be repeated because it was not done 'Right-First-Time' ?
 - **REWORK / DEFECTS**
4. What Waste results in Queues or Backlogs of materials or work ?
 - **WAITING (DUE TO A BOTTLE-NECK IN THE PROCESS)**
5. What is the Japanese word for 'Waste' ?
 - **MUDA**

QUIZ 3 REVIEW:

1. Which stage of the 5S method is used to ensure that the workers have the good habits and discipline to continue the other 4S tasks?
 - **SUSTAIN**

2. In 5S the action of removing unnecessary tools, equipment and materials from the workspace is called

 - **SORT**

3. Cleaning the workplace of dirt, dust and litter is called what in 5S ?
 - **SHINE**

4. Give one example of a 5S method used for **SET IN ORDER / STRAIGHTEN**
 - **SHADOW BOARDS**
 - **RACKS**
 - **COLORED LABELS**
 - **FLOOR MARKING etc**

QUIZ 4 REVIEW:

1. What Tool is used to understand what is Critical to Quality (CTQ) by Forming 3 categories: *threshold*, *performance*, and *excitement*?
 - **KANO ANALYSIS**
2. Splitting Customers into groups according to different needs or behaviours is called _____.
 - **SEGMENTING**
3. CTQs are also sometimes called CTCs or CTSs. What does CTS stand for?
 - **CRITICAL TO SATISFACTION**
4. Give one example of a method used to understand the **Voice of the Customer**?
 - **SURVEYS**
 - **FEEDBACK**
 - **FOCUS GROUPS**
 - **REPEAT SALE METRICS, etc**

PDCA cycle

KAIZEN

KAIZEN & CONTINUOUS IMPROVEMENT

LEAN
SOLUTIONS

Plan	Do
改	善
Change	Good

WHAT IS KAIZEN?

- Kaizen is a Japanese word made up of two distinct characters:
- Small changes for the better = Continuous Improvement
- Managing daily improvement (part of Lean Management System)
- Continuous Improvement Projects

WHAT IS A KAIZEN EVENT?

A Kaizen Event (different than Kaizen as a mindset) is a focused team activity with a specific, aggressive breakthrough objective aimed toward solving a well-defined problem.

You can expect to accomplish huge results in a very short time frame (usually 2-5 days).

Huge results
In a
Short time
frame

KAIZEN IS A CONTINUOUS PROCESS

3 Criteria of Kaizen

VARIETIES OF KAIZEN METHODS

Individual (1-2 people) Versus Teamed (5-9)

Day-to-Day (2 second- improvements) Versus Special Event

Limit the hours spent on the project

The project scope must be considered when limiting available time

Kaizen	Innovation
Un-dramatic	Dramatic
Low Cost	High Cost
Low Risk	High Risk
Human Effort	Technology
No Brainer	More Thought

BENEFITS OF KAIZEN

Empowers employees, enriches the work experience & brings out the best in everyone

Promotes the growth of the Employee & the Company

Improves quality, safety, cost, delivery, environments, throughput & customer service/satisfaction

Provides guidance from employees & serves as a barometer for leadership

WHAT'S IN A WEEK – A LOT

WHAT CAN WE DO DIFFERENTLY?

SUGGESTED KAIZEN PROCESS

1. Employee identifies a problem and writes it down
2. Idea is written up on a simple form
3. Discuss the idea with his or her supervisor
4. Supervisor reviews the idea within 24 hours
5. If possible the employee implements the idea
6. Supervisor posts the form to share with everyone

CAPTURE THE IDEAS

Continuous Improvement Idea

GEMBA WALKS

LEAN
SOLUTIONS

WHAT IS A GEMBA WALK?

The Gemba walk is an essential part of the Lean management philosophy.

- Its purpose is to allow managers and leaders to observe the actual work process, engage with employees, gain knowledge about the work process and explore opportunities for continuous improvement.
- A Gemba Walk is also an opportunity for managers and leaders to coach and receive coaching.

GEMBA WALKS

ARE NOT DONE ALONE

Gemba walks are meant to be coaching opportunities.

Use your LSW to establish a day/time and stick to your schedule. Make it routine!

Traditional Management
Style: "Do It My Way"

Lean Leadership Style:
"Follow Me, and We'll
Figure This Out Together"

LEAN
SOLUTIONS

DEFINE THE PURPOSE

Define 'purpose' for walk – why doing it?

Define scope for walk – where headed?

Coach appropriate behaviors to participants:

- One conversation at a time.
- Show respect. Listen more than you talk.
- Make no on the spot judgements, seek to understand.

TYPES OF GEMBA WALKS

-  Safety
-  5S
-  Waste – Waste Walk
-  Process Focus –
Never Focus on
Individuals
-  Walk the Value
Stream of a
Product

WHAT TO DO ON A GEMBA WALK

- If with another leader, ask to SEE their leader standard work
- Review Hr x Hr and Tier Boards
- Review corrective actions / plans for top issues
- Discuss team board problem solving process
- Review training matrix and ensure plans are in place
- Pay attention to Lean waste and review plans

TIPS & POINTS TO REMEMBER

- Gemba walks are a crucial observational method
- Checklists are an easy, quick tool for adding structure
- Stick to your plan

QUESTIONS TO ASK

Simple 3 Question Summary:

1. What is Working?
2. What Is NOT Working?
3. Given That, What Will You Do Differently Going Forward?

GEMBA CHECKLIST

What are you currently working on?

Is there an established process for this type of work?

Do you have any problems with the established processes?

Why is there a problem? How can you fix the problem?

What do you do to recognize root cause of the problem?

Who do you speak with if there's a certain problem?

QUIZ:

1. What does kaizen stand for?
 - **SMALL CHANGE FOR THE BETTER / CONTINUOUS IMPROVEMENT**
2. What are the three criteria of kaizen?
 - **DOES THE IDEA REDUCE WASTE, IMPROVE QUALITY, AND/OR INCREASE SAFETY?**
 - **DOES THE IDEA ADDRESS THE ROOT CAUSE?**
 - **IS IT STANDARDIZED?**
3. What are the different types of Gemba walks?
 - **SAFETY, 5S, WASTE, VALUE STREAM WALK**

6 FUNDAMENTALS OF LEAN

- Value
- Value Stream
- Flow
- Pull
- Perfection

BATCH & QUEUE

Process A

Process B

Process C

End User

**Elapsed Time:
33 seconds**

SINGLE PIECE FLOW

Process A

Process B

Process C

End User

Elapsed time:
15 seconds!

A blue cloud-shaped callout box with a drop shadow, containing the text 'Elapsed time: 15 seconds!' in yellow.

Upstream (suppliers)

"The ideal arrangement for Flow production should resemble a watershed: the river being the main assembly track, fed by tributaries in the shape of sub-assembly lines which, in turn, would be supplied by streams representing the machine lines fed by brooks typifying the material conveyors. Each part should flow continuously forward ... ultimately to the sea - the customers."

Frank Woollard, *Principles of Mass and Flow Production*, 1954

Downstream (customers)

FLOW & PULL

Enablers for Flow

1. Use Single Piece Flow or Smaller Batches
2. Total Productive Maintenance (TPM)
3. Line Balancing (Cycle Times and Takt Times)
4. Theory of Constraints
5. Mistake Proofing (Poka Yoke)
6. Jidoka
7. SMED (Quick Change Over)

BATCH VS SINGLE PIECE FLOW

https://www.youtube.com/watch?v=cu9CVFEHee4&list=PLGvZFHf27rGzmn1iFmj8v_3rCn07ytlmO

LINE BALANCING

Understand the TAKT TIME and CYCLE TIMES of the operations in your process and BALANCE your line. The goal is :

$$\text{CYCLE TIMES} = \text{TAKT TIME}$$

Definitions:

TAKT TIME = Demand Time = Time needed to produce each unit of product or service in order to keep up with customer demand

CYCLE TIME = Actual time taken for production of each unit or service

Note: Always be aware for the specific definition of Cycle Time in your work or business because there can be subtle differences between companies

LINE BALANCING EXAMPLE

Demand is 4,800 units per month. Assuming 30 days per month and 8 hours per day.

Therefore TAKT TIME in minutes is:

Total time period in minutes ÷ total number units demanded

$$(30 \times 8 \times 60) \div 4800 = 3 \text{ minutes}$$

QUIZ 6:

1. What is the Japanese name used for 'Mistake Proofing' of a process step ?
 - **POKA YOKE**
2. FLOW is critical to any process. What needs to Flow in an Airport or Hospital ?
 - **PEOPLE, INFORMATION, LUGGAGE, EQUIPMENT**
3. **SMED** is an acronym used in Lean Manufacturing. What is another name for SMED?
 - **QUICK CHANGE OVER**
4. A fundamental concept of any Lean Process is that it has no delays, constraints, waiting or bottlenecks. This Lean concept is called _____.
 - **FLOW**

6 FUNDAMENTALS OF LEAN

- Value
- Value Stream
- Flow
- Pull
- Perfection

Pull

Downstream Demand
Driven Production

Pull is Sometimes Referred to as
‘Just-In-Time Production’

JUST IN TIME

“PULL” and “KANBAN” are fundamental for...a JUST-IN-TIME process

- **WHAT** is needed
- **HOW MUCH** is needed
- **WHERE** it is needed
- (**WHEN** it is needed)

Note: ‘**WHEN**’ is usually not necessary because it is assumed it is needed **ASAP**

KANBAN

Kanban is the Japanese word for 'card' or 'ticket'

The Kanban card was an authorization for materials to be moved from an Upstream location to a Downstream location. The card had printed on it What was needed How much was needed and Where it is needed.

A sequence of Kanbans pulls material through the process

Electronic signals are generally used today, but the system is still called a Kanban

KANBAN CARD EXAMPLE

Supplier: PU1 Description: Production Unit 1 Kanbans: 9	Customer: PU2 Location: Loc02 Container: Box 1 Qty: 100
created: 10/12/2013 22:33:00 printed: 11/12/2013 12:10:11  INTEGRATED KANBAN SYSTEM Item ID: 012345	Description: Item 012345 Kanban ID:  1090

KANBAN

Good Kanban Systems Help to Minimize Inventory & WIP

KANBAN BOARD EXAMPLES

KANBAN BOARD EXAMPLES

Returned Kanban

Reaction Triggers

PROCESS MAPPING

There are usually 3 view of a process:

1

What people *THINK* it is..

2

What it *ACTUALLY* is..

3

What it *SHOULD* be..

STANDARD PROCESS MAPPING SYMBOLS

Standard symbols for Process Mapping:

(available in Microsoft Office™, Visio™, iGrafx™, SigmaFlow™ and other products)

A **RECTANGLE** indicates an activity. Statements within the rectangle should begin with a verb

A **PARALLELAGRAM** shows that there are data

A **DIAMOND** signifies a decision point. Only two paths emerge from a decision point: No and Yes

An **ELLIPSE** shows the start and end of the process

An **ARROW** shows the connection and direction of flow

A **CIRCLE WITH A LETTER OR NUMBER INSIDE** symbolizes the continuation of a flowchart to another page

PROCESS MAPPING:

COFFEE ACTIVITY

VISUAL MANAGEMENT

LEAN
SOLUTIONS

LEARNING OBJECTIVES

- Understand what is Visual Management
- Understanding why Visual Management is important in a Lean Environment
- Learn how to implement Visual Management that fits in your organization

What is Visual Management?

VISUAL MANAGEMENT

Can you understand what
is show on the left?

WHAT IS VISUAL MANAGEMENT?

- The ability to manage everything in your business visually
- Managing visually is the ability of a system to quickly show the current status to anyone that stands and observes, within 30 seconds.
- **EVERYONE** in your business understands and knows how to respond if something is wrong.

WHAT IS VISUAL MANAGEMENT?

- Visual Management helps us become more effective problem-solvers by helping us with problem detection, since it helps us identify abnormalities quickly and easily.
- Visual Management helps us manage with our eyes. Done correctly, it helps us see at a glance how we're doing without having to read through reports, look up data, or wait for a briefing.

VISUAL MANAGEMENT AND 5S

DESIGNING VISUAL SYSTEMS

- Who is your audience
- Using the right media
- Don't overdo it

LEADING CHARACTERISTICS

- Clear and easy to understand
- Team ownership
- Promote team ownership
- Close to the process
- Limit the data displayed

VISUAL MANAGEMENT

BOARD EXAMPLES

Safety Cross

QDPI Indicators
with Safety 1st

HOW TO START YOUR VM JOURNEY

- Go See
- Brainstorming—What problems are you trying to solve?
- Team members understand why VMS are beneficial
- Discuss VMS components
- Create board using the VM board elements
- Try it out! Check and adjust as needed

POINTS TO REVIEW

- Keep it Clear and Concise
- Who, What, Where
- Basic Markings First
- Understandable for All

QUIZ:

1. What is a 'Gemba Walk' ?
 - **Going to see for yourself what is happening where the real work is done**
2. What is the benefit of having a Visual Work Place ?
 - **All team members can see the status of work and operations easily and at the same time.**
3. Give one example of a Visual Management tool or technique ?
 - **Color Coding, Notice Boards, Graphs and Charts, Good Labelling**
4. A fundamental concept of any Lean Process is that it has well defined and repeatable actions by workers. This concept is call _____work
 - **STANDARDIZED**

Poka Yoke & Jidoka

POKA YOKE & JIDOKA PREVENT DEFECTS

- Create no defects / errors
- Accept no defects / errors
- Pass no defects / errors

JIDOKA

- **Work** stops immediately when a problem first is detected.
- The **Root Cause** of the defect is discovered and corrected before work continues
- This prevents defects being passed on downstream
- This short term disruption to FLOW will improve both FLOW and QUALITY in the long term

POKA YOKE

Originally called Baka Yoke (Idiot Proofing) it was changed to Poka Yoke (mistake proofing) by Toyota in 1960's so as not to dishonor anyone to be labeled as an "Idiot".

Poka Yoke = Mistake Proofing

Prevent mistakes rather than correct mistakes
Prevent defects rather than correct defects

POKA YOKE EXAMPLES

Drill Poka Yoke

POKA YOKE EXAMPLES

Andon Boards (Screens)

POKA YOKE OFFICE EXAMPLES

Your Google Account is more than just Gmail.

Changeover Reduction **SMED**

brought to you by:

**PATRICK
ADAMS**
CONSULTING

WHAT IS

QUICK CHANGEOVER?

A process for dramatically
reducing setup time...

Also Known as:

- Single Minute Exchange of Dies (SMED)
- Setup Reduction

<https://youtu.be/UlIGl3laGAo>

SET UP DEFINITION

During this time the equipment is
idle and not producing parts.

The length of time it takes to changeover a machine from the last good part of a production run to the first good part of the next production run.

last good part

next good part

WHY IMPLEMENT QUICK CHANGEOVER

6 different models produced.
1900 parts required per day.
Cycle Time = 12 seconds
1900 parts / 12 seconds each =
380 minutes required per day.

It will take 6 days to cycle thru all models requiring inventory of at least 6 days of each model. That is 11,400 pieces total, if each costs \$1 there is \$11,400 because of set-up.

QUICK CHANGEOVER: DEFINITION

Internal Set-Up Activities

- An activity or task that can only be performed while the machine is stopped. (Stopping the machine to change a tool)

External Set-Up Activities

- An activity or task that can be performed while the machine is running (Prepare tools, tooling, and required paperwork, while the machine is running)

Steps			Pre-Work	
1.	Measure total changeover time, study current conditions. “Document Reality.” (Video)			60 Minutes
2.	Identify internal vs. external steps and calculate individual times.			5 5 3 5 3 8 6 11 3 11 E I E I E I E I E I
3.	Strip out external steps and pull them forward before previous part run ends.	20 Min.	E	I
4.	Reduce and eliminate the internal setup, adjustments, etc.	20 Min.	E	I 20 Minutes
5.	Reduce the external elements.	10 Minutes	E	I 20 Minutes
6.	Identify parallel tasks. Two people working in harmony with one another, rather than one.	10 Minutes	E	I 10 Minutes
7.	Practicing the new and improved changeover method	8 Minutes	E	I 8 Minutes
8.	Standardize and improve the new changeover procedure over time.	8 Minutes	E	I 8 Minutes

REDUCE/ELIMINATE INTERNAL STEPS

- Implement good 5S
- Standardize spacer & fixture heights
- Pre-set stops, gauges, limit switches, and tools
- Add center lines and reference planes
- Use of Changeover Carts
- Preset locations to eliminate measurement
- Numerical Settings vs. “feel”
- Gauges used so that adjustment can be preset without producing any defective parts
- Color-coding setup locations per part numbers
- V-notch and pin locators for dies
- Quick Release Clamps (one-turn / one-motion)

REDUCE/ELIMINATE INTERNAL STEPS
